***Allowable Subject Matter***

1. Claims 1-27 contain allowable subject matter over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method of recording to an optical media. The independent claims identify the feature of "sending the selected data through an application format interface associated with the selected one of the plurality of optical media formats to a stash file that is part of the IMAPI; creating a task list of operations to perform in recording the selected data to the selected one of the optical media recording devices; and recording the selected data stored in the stash file by executing the task list directly from Kernel Mode of operating system". Furthermore, the independent claims identify the feature of "the IMAPI having the plurality of COM objects wherein each one of the COM objects performs an operation in the recording of data to the optical media, and the plurality of COM objects include a disk master, a stash file, a disk recorder, and a burn engine". The closest prior art, Tognazzini discloses a conventional recording/reproducing apparatus, either singularly or in combination fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tognazzini discloses a recording media having separate read only and read/write areas.

Minoura et al discloses data processing apparatus capable of reading data from different format cd-roms according to different processing methods of the data.

Dunphy et al discloses a data storage and protection system.
